

PICH SOKSOVANN

DATA SCIENCE & AI
ENGINEERING STUDENT

FUTURE OBJECTIVES

I am a dedicated Data Science and AI Engineering student with a strong passion for solving real-world problems. I use data science to study and understand the difficulties people face in their daily lives. My goal is to use AI engineering to build smart tools that make life easier and more efficient. I am committed to using my skills to drive technology and innovation in Cambodia.

EDUCATION

CamTech University

Data Science & AI Engineering
2025 – present

Hun Sen Bun Rany Wat Phnom High School

High School
2019 – 2025

SKILLS

- Leadership
- Technical Direction
- Communication
- Project Management
- Problem-solving
- Time Management
- Programming Languages
- C • C++ • python • HTML/CSS
- Tools
- Gemini • Claude

Healthcare System – CamTech University

AI Developer (Leader)

December 2025 – present

- Led development of full-stack health triage app with React frontend, Node/Express backend, and 100+ disease AI matching database
- Built AI probability engine that accurately diagnoses diseases from patient symptoms with clinical-grade precision
- Implemented secure phone-based OTP authentication with patient accounts, symptom history, and personalized health recommendations

Internship Project – CamTech University

Smart-RentHouse project (Leader)

May 2026 – present

- Led development team to build AI-powered property management system with React frontend and Python FastAPI backend for automated billing and tenant tracking
- Developed responsive user interface with React, Vite, and Tailwind CSS integrated with backend tenant database management system
- Created AI optical character recognition system to automate utility meter reading and bank payment receipt verification for landlords

Computer Fundamental Project – CamTech University

Building QR Attendance project

April 2026 – July 2026

- Designed SQLite database schema to securely manage student information and device-to-student binding for proxy prevention
- Built automated QR authentication system with 10-second token refresh and WiFi verification for network-restricted check-ins
- Demonstrated real-time data logging and attendance tracking platform to professors with complete session history management
